MVDS2/DiY

## User Manual

Includes install, configuration and trouble shooting information for the broadband Broadcast outdoor radio.

## **Copyright**

Copyright © 2017 all rights reserved. No part of this publication may be reproduced, adapted, stored in a retrieval system, translated into any language, or transmitted in any form or by any means without the written permission of the supplier.

## **About This Manual**

This manual includes install, configuration and trouble shooting for the KU Band SSPA radio. It can help you in avoiding the unforeseen problems and use the outdoor radio correctly.

## **Technical Support**

If you have difficulty resolving the problem while installing or using the radio, Please contact the supplier for support.

## 2 General Description.

MVDS2 is the new version of Elber Multichannel audio/video distribution system; it has been designed to transmit combined DVB-S/S2 carriers or full satellite transponders at Ku-band frequencies.

MVDS2 is a fully weatherproof IP65 housing suitable for outdoor installations in harsh environments, available in two versions, standard or high power; the standard version hosts GaAs Fet transistor as final stage, while the high power utilizes GaN FET. GaN technology achieves higher efficiency and superior performances in terms of linearity compared to the GaAs.

The system is protected with automatic squelch of final stages in case of critical temperature or power overload.

The management and monitoring of the equipment can be achieved through a very easy and intuitive web interface.

## 3 Installation.

- Unpack the equipment and check first of all if there are any damages due to the transport.
- The box should contain:
  - The MVDS2
  - One DC supply cable
  - One Cable for Ethernet communication
- Install the equipment on a mast.
- The equipment must be correctly grounded, to guarantee a secure functioning.
- Connect to the correct power voltage reading the information on the manual or on the label attached to each equipment, containing the serial number.
- Connect the network cable to the plug. The last used configuration will be loaded.
- Setup the equipment according to the needs consulting the user manual.

## 4 Technical Specifications.

### 4.1 General specifications.

|                             |                             |
|-----------------------------|-----------------------------|
| Operating temperature range | -10 °C ÷ 55 °C              |
| Relative Humidity           | 0 ÷ 95 °C condensing        |
| Power supply                | 22 ÷ 28 V (2 pin connector) |
| Maximum Power consumption   | 150 W                       |

### 4.2 Mechanical specifications.

|        |          |
|--------|----------|
| Width  | 128.5 mm |
| Height | 210 mm   |
| Depth  | 322.5 mm |
| Weight | < 12 Kg  |

### 4.3 System specifications.

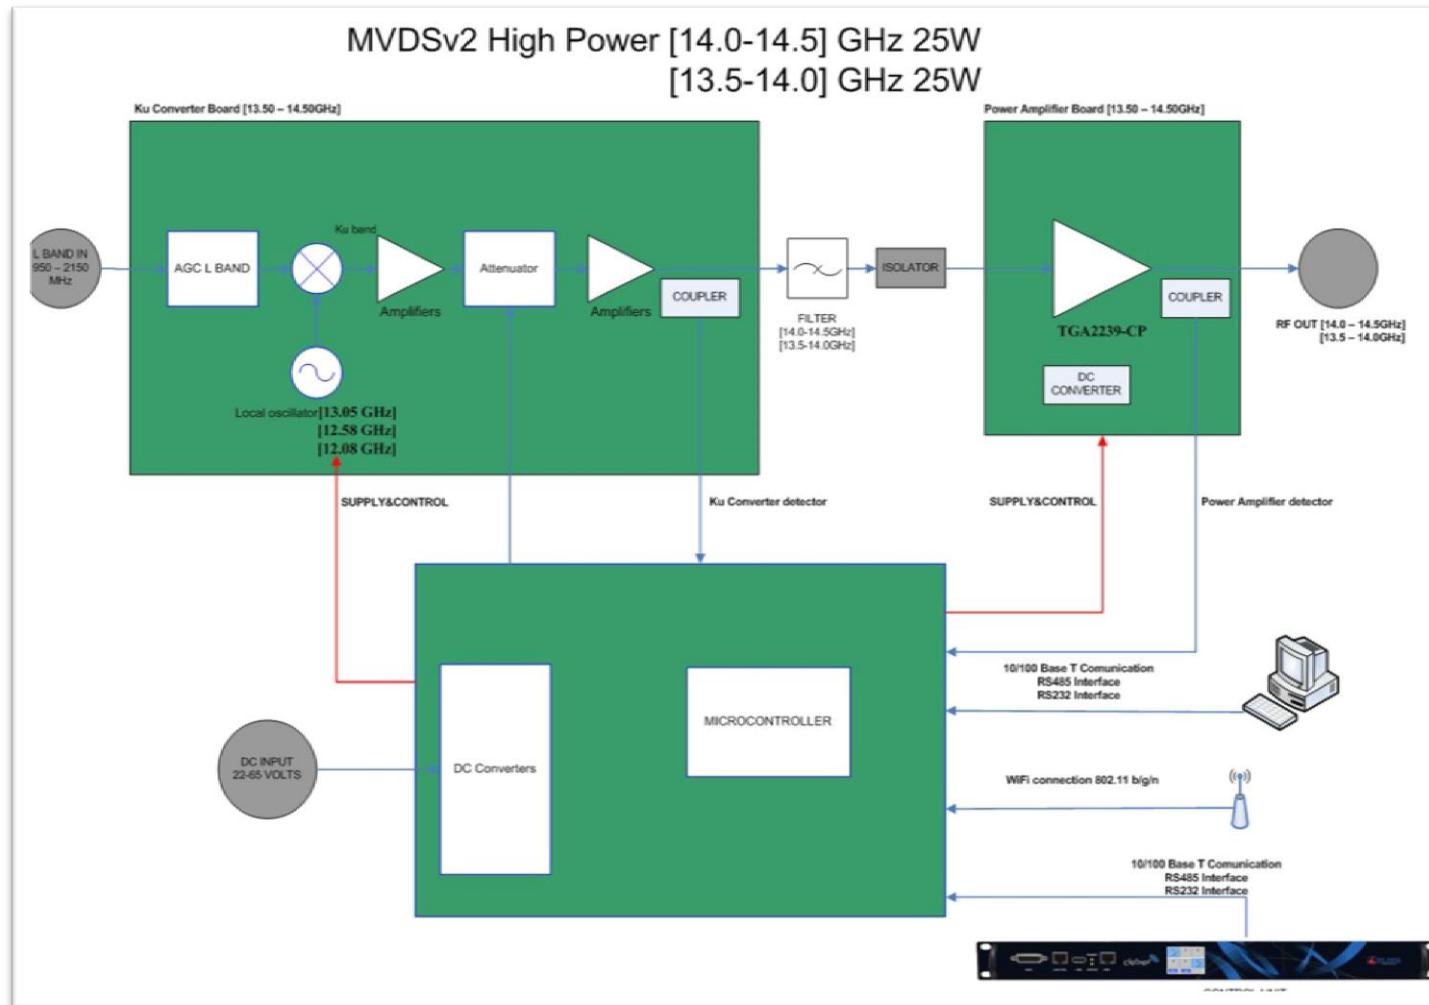

FIGURE 6: BLOCK DIAGRAM HIGH POWER (25W) 13.50-14.50 GHz

## 6 Web interface.

MVDS2 is equipped with a WEB interface for an easier and intuitive monitoring and equipment configuration. The connection to Web server can be achieved through dedicated cable directly to the outdoor unit.

With a very common *Web browser* (like Internet Explorer, Mozilla Firefox, Google Chrome, Opera, Safari...) it is possible to check equipment status and verify performances even remotely simply writing in the address bar the IP address of the equipment. In order to check the IP address, please refer to par.

**Important Note:** Default IP address is 192.168.10.150.

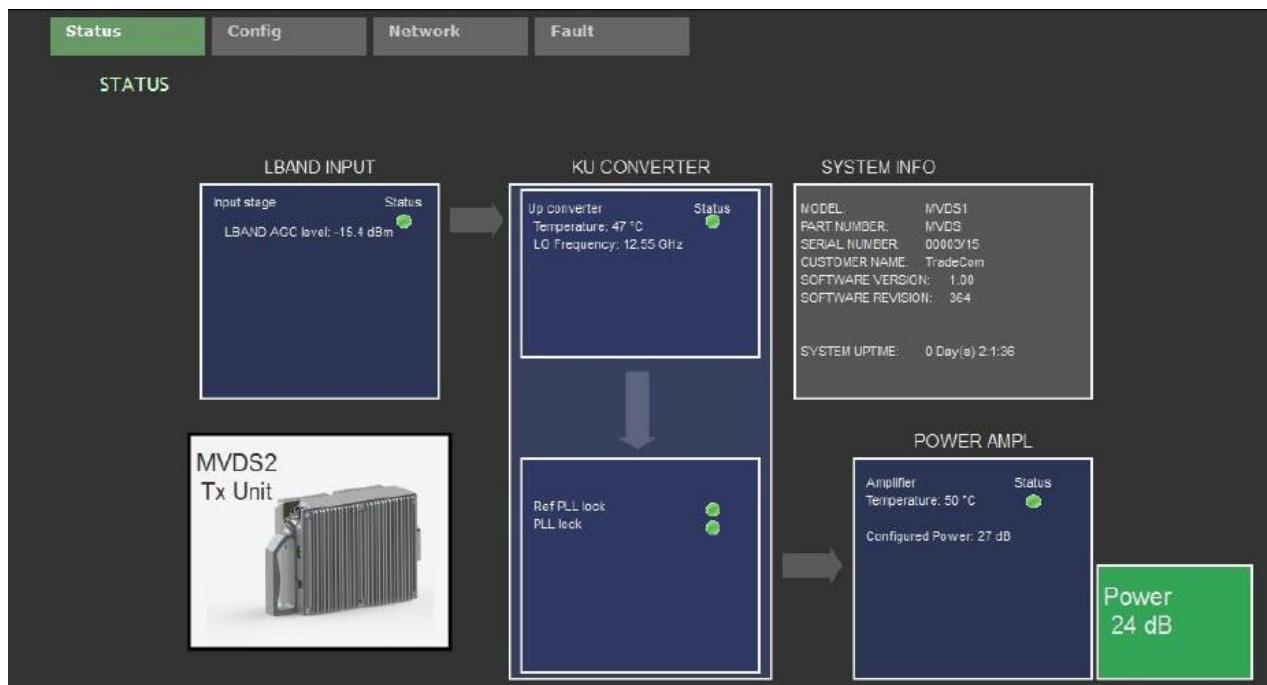

FIGURE 7: WEB INTERFACE HOME PAGE

Figure 7 shows the home page of the Web interface, which by default is the Status Page.

In the upper part, the user can select the desired page between:

- 1) Status
- 2) Config
- 3) Network
- 4) Fault

## 6.1 Status.

The status page is composed of 6 blocks; in the right part, the grey box includes all system information, including S/N, P/N and firmware versions.

FIGURE 8: SYSTEM INFO

The blue boxes shows graphically the different parts composing the system, that are:

- L-Band input
- KU converter
- Power Amplifier

For each part, a led icon resumes the sub-part status (green = ok; red = alarm; yellow = warning).

FIGURE 9: L-BAND INPUT STATUS

For the L-band stage, it's available the input level measurement in dBm as shown in Figure 9.

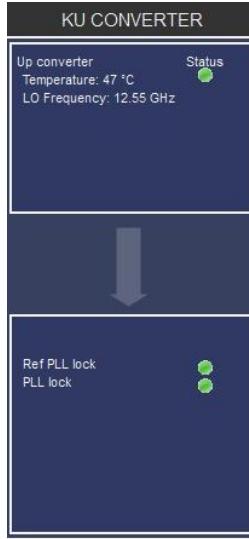

FIGURE 10: KU CONVERTER STATUS

The Ku converter board presents following measurements and/or information:

1. Temperature
2. Indication of oscillator frequency
3. Reference locking status
4. PLL Lock status

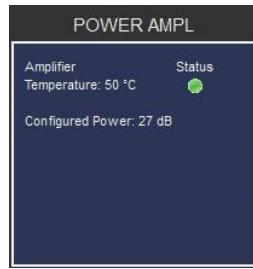

FIGURE 11: POWER AMPLIFIER STATUS

The Power Amplifier board presents following measurements and/or information:

1. Temperature
2. Configured output power

## 6.2 Config.

The screenshot shows a web-based configuration interface with a dark background. At the top, there are four tabs: 'Status' (disabled), 'Config' (enabled and highlighted in green), 'Network' (disabled), and 'Fault' (disabled). Below the tabs, the word 'CONFIG' is centered in a large white font.

The main configuration area contains several input fields and controls:

- Power control:** A dropdown menu set to 'RF ON' with an 'APPLY' button to its right.
- Output Power:** A slider control set to 55.00% with an 'APPLY' button to its right.
- LBand AGC:** A dropdown menu set to 'ON' with an 'APPLY' button to its right.
- Power AGC:** A dropdown menu set to 'ON' with an 'APPLY' button to its right.
- Manual LBAND input gain:** A slider control set to 0 with an 'APPLY' button to its right.
- KU Conv Warning Temp:** A field set to 55 with units °C and an 'APPLY' button to its right.
- KU Conv Alarm Temp:** A field set to 65 with units °C and an 'APPLY' button to its right.
- Power Ampl Warning Temp:** A field set to 55 with units °C and an 'APPLY' button to its right.
- Power Ampl Alarm Temp:** A field set to 65 with units °C and an 'APPLY' button to its right.
- System Reset:** A large 'RESET' button.

At the bottom left, there is a section titled 'Working point configuration' containing a table:

|                   | Lower Power Point | Working Power Point | Higher Power Point |
|-------------------|-------------------|---------------------|--------------------|
| Power point in dB | 21.0              | 27.0                | 33.0               |
|                   | APPLY dB          | APPLY dB            | APPLY dB           |

FIGURE 12: WEB INTERFACE CONFIG PAGE.

To modify any field shown in Figure 12 it is necessary to click on the Apply button besides to validate.  
Hereunder the list of field and related description.

| Field         | Description   |
|---------------|---|
| Power Control | Let the user enable or disable the power amplifier, |

|                          |   |
|--------------------------|---|
|                          | choosing between RF ON and RF OFF   |
| Output Power             | Let the user set the output power in % of the maximum power   |
| LBand AGC                | Let the user enable/disable the input Automatic Gain Control (cable loss compensation)  |
| Power AGC                | Let the user enable/disable the output Automatic Gain Control (compensating temperature and input level variations)                 |
| Manual L-Band input gain | Let the user set manually the input gain (LBand AGC off)  |
| KU conv. Warning Temp    | Let the user set the temperature warning threshold  |
| KU conv. Alarm Temp      | Let the user set the temperature alarm threshold  |
| Power Ampl. Warning Temp | Let the user set the power amplifier temperature warning threshold  |
| Power Ampl. Alarm Temp   | Let the user set the power amplifier temperature alarm threshold  |
| System Reset             | Let the user reset the unit   |
| Power point in dB        | Let the user set the power out between a Lower threshold and a Higher threshold, after intermodulation check and power fine tuning. |

### 6.3 Network.

FIGURE 13: WEB INTERFACE NETWORK PAGE.

| Field           | Description   |
|-----------------|---|
| IP Address      | Let the user set the IP address of the equipment                        |
| Netmask         | Let the user set the IP subnet mask of the equipment                    |
| Gateway         | Let the user set the Gateway IP address of the equipment                |
| MAC Address     | Shows the equipment MAC address   |
| Serial standard | Let the user configure the serial configuration between RS232 and RS485 |
| RS485 ID        | Let the user set the RS485 address of the equipment                     |
| Baud rate       | Let the user set the RS232 baud rate.                                   |

To confirm modifications it is necessary to push on "CONFIRM" button and then "APPLY" to validate; upon this operation the system will reboot causing transmission interruption.

## 6.4 Fault.

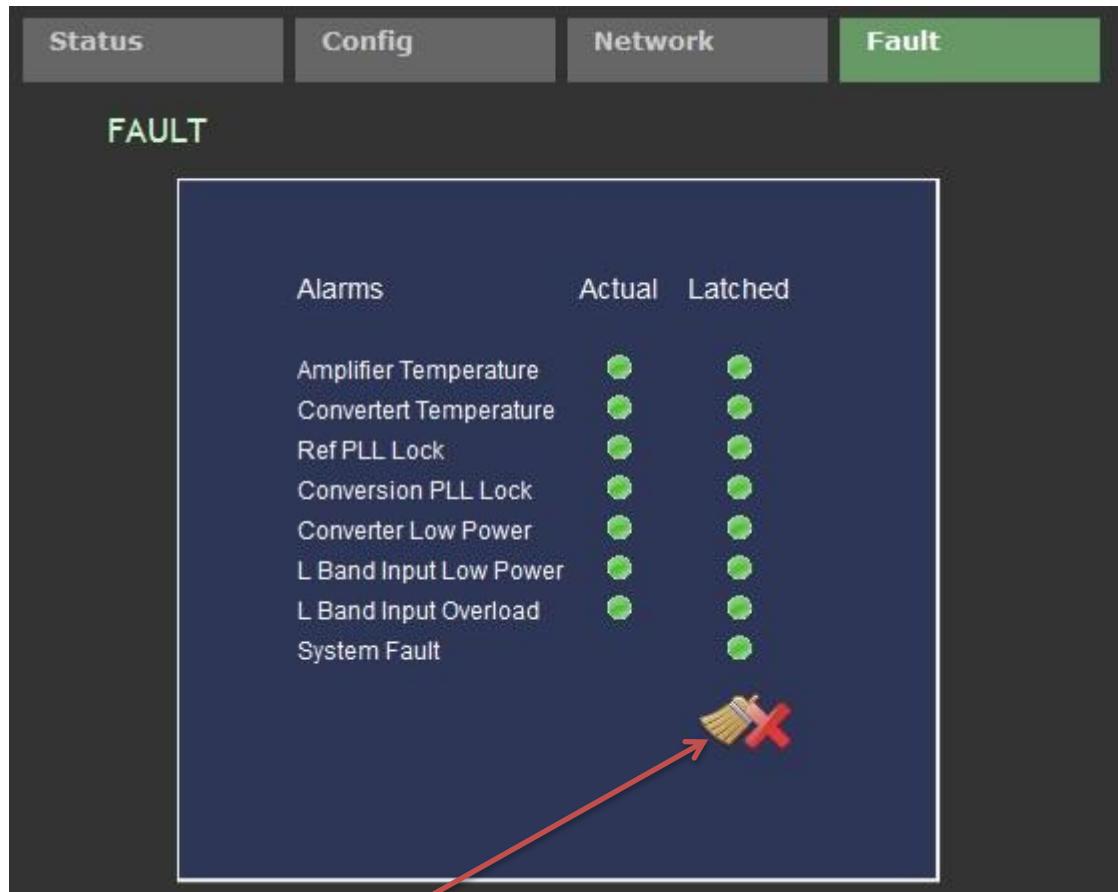

FIGURE 14: WEB INTERFACE ALARM PAGE.

Figure 14 shows alarms of the equipment, divided in two columns, the actual and the historical. Historic alarms can be reset clicking here.

## 7 Mechanics and connectors.
